Heritage Impact Assessment Sift Methodology

Client

Colchester City Council

Date: January 2025

Introduction

This assessment has been undertaken to support the production of the new Colchester Local Plan. It provides a high-level sift of the sites being considered for allocation to determine the need for, and level of, further any heritage impact assessment.

Heritage impact assessments may be required to provide a detailed and proportionate historic environment evidence base, as required by Paragraphs 32 and 36 of the National Planning Policy Framework (NPPF, December 2024), to establish the suitability of a site prior to formal allocation.

Methodology

The approach to the sift comprised a desk-based assessment of each site to identify any heritage assets with the potential to be affected by the allocation and future development of the site. A 500m study area of each site was adopted, reduced to 250m for city centre sites surrounded by a high density of heritage assets. The Colchester Historic Environment Record and the National Heritage List for England were also consulted.

The identification of the potentially affected heritage assets and their setting follows Step 1 of the staged assessment approach set out in Historic England's guidance document 'Historic Environment Good Practice Advice in Planning Note 3 (Second Edition): The Setting of Heritage Assets' (GPA3, 2017).¹

Following the sift, three levels of further heritage impact assessment have been recommended depending on the potential impact of the allocation of the site on the historic environment:

- No further assessment: The allocation of these sites has been assessed to have no effect on the significance of any heritage assets.
- Proforma Heritage Impact Assessment: A high-level heritage impact assessment in the form
 of a proforma is required to understand the contribution the site makes to the significance of
 nearby heritage assets and the potential effects of the site allocation on their significance.
- Detailed Heritage Impact Assessment: A detailed heritage impact assessment is required to understand the contribution the site makes to the significance of nearby heritage assets and the potential effects of the site allocation on their significance due to the scale of the site and the proximity and/ or quantity of heritage assets affected.
